KEY ADVANTAGES OF SANDPIPER HEAVY DUTY BALL VALVE PUMPS

THE SOLUTION FOR FLUIDS CONTAINING SETTLING, SUSPENDED & FLOATING SOLIDS

MULTIPLE PORTING POSITIONS A SANDPIPER EXCLUSIVE

Top, Down, & Side Porting Positions

Optimized performance depending on the pumped fluid or installation requirements.

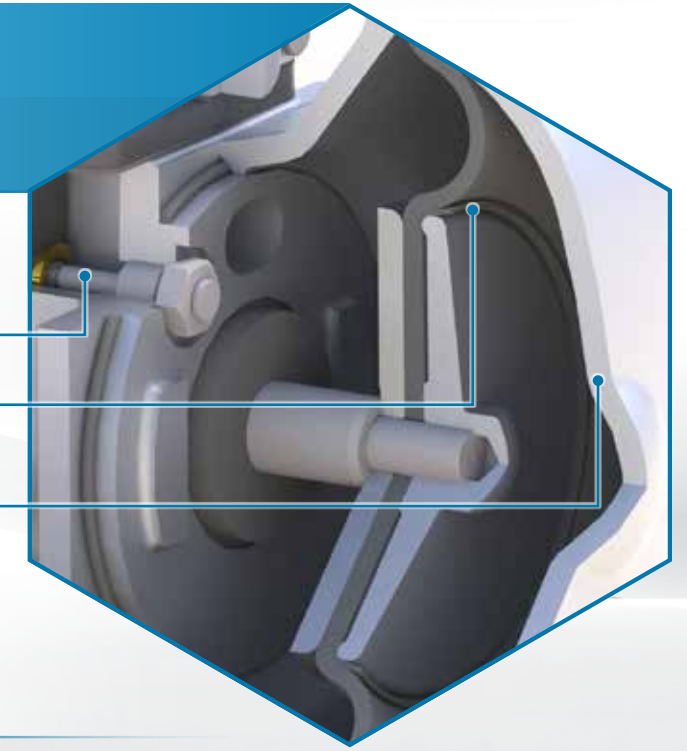

- **Top Ported:** For fluids containing floating solids, suspended solids, or entrained gases. The discharge port is positioned above the center of the pump for easier evacuation and less build-up of solid material or gases.
- **Down Ported:** For fluids containing settling solids. The discharge port is positioned below the center of the pump so solids settle in the elbow and are discharged. This helps reduce wear on the diaphragms and associated components.
- **Side Ported:** For use in confined spaces. The ports are positioned with the center of the pump, allowing for installation in smaller, confined spaces.

HEAVY DUTY WEAR PARTS A SANDPIPER EXCLUSIVE

SANDPIPER Heavy Duty Ball Valve Pump Features

- Heavy duty plunger bushings and actuator pins are designed to withstand severe applications
- Diaphragm wear pads are installed between the diaphragm and outer diaphragm plate, providing a secondary wear surface which extends the life of the diaphragm
- Thicker, more robust wetted castings provide extended wear resistance
- Heavy duty weighted check valve balls are 30-60% heavier than solid rubber check balls, allowing for more consistent chamber filling

SANDPIPER'S EXTERNALLY SERVICEABLE AIR DISTRIBUTION SYSTEM (ESADS+PLUS) QUICK & EASY ACCESS TO MAXIMIZE UPTIME

The Air Motor's Pilot Valve is the Most Often Serviced Part on an AODD Pump

SANDPIPER's Externally Serviceable Air Distribution System (ESADS+PLUS) allows for quick and easy access to the pilot and spool valves without removing the pump from service, maximizing uptime!

SANDPIPER

5 MINUTES - MAINTENANCE / CLEANING
Accomplished in minutes without removing pump from service by removing only 4 bolts

\$ Saves you money by minimizing downtime

Competitor pumps require disassembly and re-assembly of many parts, requiring additional knowledge and time; leading to increased downtime and cost.

COMPETITORS

55+ MINUTES MAINTENANCE / CLEANING
The air valve components can only be accessed by removing the pump from service and taking it entirely apart

\$\$\$ Costs you money due to extended downtime

FEATURES & BENEFITS

EXCLUSIVE TO SANDPIPER HEAVY DUTY BALL VALVE PUMPS

Externally Serviceable Air Distribution System

Allows for quick and easy access to the main air drive components without disassembly of the entire pump and / or removing it from service

Cross-Drilled Directional Spool Valve

Guarantees the pump will not stall and ensures on / off reliability

All Bolted Construction

Ensure sealing forces are applied evenly across the pump for leak-free operation

Heavy Duty Actuator Plungers

Ensure reliable pilot valve operation

Robust Diaphragm Connecting Rod

Guaranteed not to bend or break; assures reliable and consistent diaphragm operation

Diaphragm Wear Pads

Reduce fluid velocity and frictional losses, which lessens wear and allows for more flow capacity

Weighted Elastomeric Check Balls

For reliable pump performance with viscous fluids

Large Flow Area

Reduces fluid velocity through pump, which often lessens wear

Thick Manifold & Chamber Walls

Greater wear resistance when pumping solids and solid laden slurries, providing extended service life

1 1/2"
40 mm

HDB1 1/2 / HDB40 Metallic - Porting: Top, Side, Down

SOLIDS HANDLING
Up to .25" (6.3 mm)

MAX FLOW
105 GPM (397 LPM)

MAX PRESSURE
125 psi (8.6 bar)

DISPLACEMENT
.37 gallon (1.4 liter)

OPTIONS

Porting	Wet End	Elastomers		Air End
1 1/2" NPT / BSP Threaded	Aluminum	Nitrile (Buna)	Fluorocarbon (FKM)	Aluminum
	Stainless Steel	Neoprene	Hytrel®	Cast Iron
	Cast Iron	Santoprene®	EPDM	
	Alloy C	PTFE		

2"
50 mm

HDB2 Metallic - Porting: Top, Down

SOLIDS HANDLING
Up to .375" (9 mm)

MAX FLOW
135 GPM (511 LPM)

MAX PRESSURE
125 psi (8.6 bar)

DISPLACEMENT
.43 gallon (1.63 liter)

OPTIONS

Porting	Wet End	Elastomers		Air End
2" NPT	Aluminum	Nitrile (Buna)	Fluorocarbon (FKM)	Aluminum
	Stainless Steel	Neoprene	Hytrel®	Cast Iron
	Cast Iron	Santoprene®	EPDM	
	Alloy C	PTFE

SANDPIPER'S EXCLUSIVE DOWN PORTED ADVANTAGE

SANDPIPER HEAVY DUTY BALL VALVE PUMP

VS

TYPICAL TOP DISCHARGE BALL VALVE PUMP

What happens when solids settle in the pump?

- ✓ Nothing impedes the operation of the pump
- ✓ As solids settle, they collect in the elbow instead of the diaphragm chamber and are discharged; this limits wear on the diaphragm and associated components

What happens when solids settle in the pump?

- ✗ Bent, broken diaphragm plates
- ✗ Non-uniform diaphragm wear
- ✗ Bent, broken diaphragm connecting rods
- ✗ Restriction on the suction side of the pump
